

## Micro Metal Gearmotor Push Header Shim (pack of 5) COM0804

A lovely little shim to mount on the back of our micro metal gearmotors that provides a male 0.1" push header.

Simply solder this board to the back of a micro metal gearmotor and from that point forth be free from soldering! Ideal for making motors more friendly for workshops or children. We've also added a decoupling capacitor right at the motor terminals to reduce noise.

Don't want to solder? You can buy our micro metal gearmotors with the shim pre-applied!

Includes:

- 5 x Micro metal gearmotor shim
